

# Hostel management system

## Problem Statement

Hostel management system is to provide college students accommodation to the university hostel more efficiently. This project also keeps details of the hostellers and applied to students. It is headed by excoordin. He will be the admin. This document is intended to minimize human work & make hostel allocation an easier job for students & hostel authorities by providing online application for hostel.

## SRS

It has an admin who manages the hostel, allots & payment methods. The admin will allocate a room for a student according to rate. The admin will also keep track of payment made by students.

As the student's course is over, they will vacate their rooms, so it is required for the admin to remove their records.

Students make payment according to the bill generated which have the attending bill no, type, date.

The details of the students staying in hostels like name, place, address, contact details is maintained in the database.

The hostel is categorized into two types i.e. boys & girls. Each hostel type has diff costs, wardn and name.

A hostel is made up of many rooms. A mess account will also be generated. This has the mess status for whole month. On this basis monthly charges of mess of a student will be defined.

The hostel management system will allow renewing the students registration every year, the rooms of hostel are composed of table & beds where a rent of the room is maintained.
