Online Shopping System

Problem Statement

Online shopping system to be developed for all kinds of products with web app is intended to provide complete solutions for vendors as well as customers through a single gateway using the internet. It will provide vendors to setup online shops, customer to browse through the shop and purchase them online without having to visit the shop physically. The admin module will enable a system admin to approve and reject requests for new shops & maintain various lists of shop category. The system allows the customers to maintain their cart for add/remove the product over the internet.

SRS

The customer must have an account for the online website where he/she can purchase products.

If customer wants to buy the product, then he/she must be registered, unregistered user can't go to the shopping cart.

customer login to the system by entering valid user id & password for shopping.

changes to cart means the customer after login or registration can make order or cancel order of the product from the shopping cart

The products sold for customers are sold in various categories like men, women, kids & home products.

customers can view all available products, compare them & make a choice for purchasing the products.

For customer there are many types of same billing, which will be prepaid as debit or credit card, post paid as after shipping, check, bank draft. The security will provide by the third party

After the logout/end the customer will be logged out.
